Twitter data pulled for the #rstats tweet on 2016-11-02 is stored in the downloaded file data.csv and can be read with:

```r
library(ggplot2)
twdata <- read.csv("data.csv")
create_plot <- function(d){
  p <-
      ggplot(data = top_15, aes(x = reorder(token, count), y = count)) + geom_bar(stat ="identity", fil
      coord_flip() +
      xlab("") +
      ylab("")  +
      theme_bw()+
      scale_y_continuous(expand = c(0,0)) +
      theme(axis.line = element_line(colour = "black"),
            panel.grid.major = element_line(colour='lightgrey'),
            panel.grid.minor = element_blank(),
            panel.border = element_blank(),
            panel.background = element_blank(),
            axis.text = element_text(size=12, colour = "steelblue"))
}
```

```r
create_plot(twdata %>% head(n=18) %>% .[-c(1:3),])
```
